

REQUEST FOR PROPOSAL (RFP) #17-01

Evaluation of On-site and In-situ Treatment Alternatives for Contaminated Soils

POSTED DATE: 9/1/17 CLOSING DATE: 9/30/17

Questions & Answers:

1. The RFP states that the objective of the proposal is to develop an experimental program for management (treatment and minimization) of special wastes. Are there any particular types or groups of "special wastes" targeted in the proposal or are you expecting that this information will be generated from the study?

The targeted wastes will be generated from the study.

2. Are there any IDOT databases (or project sites where such information is available) which you could recommend?

No, this information will need to be gathered from various sources and generated from the study.

3. The RFP states that a limited geographical area of District 1 will (most likely) be used for the inventory of contaminants. Is there any particular geographical area that the RFP was targeting? This is because the soil composition, contaminants, hydrogeology, etc. could vary from site to site.

District 1 includes McHenry, Lake, Kane, Cook, DuPage, and Will counties. All of these counties could be included, but with a focus of Chicago and the surrounding suburbs.

4. Could we also include other sites in Illinois that might be relevant to a study like this?

This could possibly be done after Task 2 is completed.
